

## A5 Tuning Control Assembly 400074-36

The Tuning Control assembly 400074-36 is used in DF2100 Receiver family to set the center frequency of the front end band-pass filter.

The board setup is somewhat involved and the user should carefully follow the procedure described in the DF2100 manual.

The proper setup of this board is essential for the receiver's sensitivity and its ability to reject interfering signals.

The board's firmware is contained in the PROM that provides voltage/frequency information for the board's D/A converter.
