

A8 Display Board Assembly 400074-20

The A8 Display Board assembly number 400074-20-1 is a direct replacement for the older version 400074-20. There is no need for any kind of alignment. It can be easily installed without any tools.

The board is available in two options.

Option 1

Keypad connector is floating making the board easier to align with the chassis mount connector.

Option 2

Keypad connector is soldered directly to the board (DF2100 models after 1992)

The schematics for old and new boards are exactly the same.

The only difference between the assemblies is that the thru-hole mount components were replaced by the surface mount type.
